

Titanic Dataset - EDA Report

1. Introduction

This report presents an Exploratory Data Analysis of the Titanic dataset containing 891 passengers with 12 features including survival status, age, gender, class and fare.

2. Dataset Overview

- Total Passengers: 891
- Features: 12
- Missing Values Found In: Age (177), Cabin (687), Embarked (2)

3. Key Findings

- Only 38% of passengers survived
- Females had much higher survival rate than males
- 1st class passengers survived more than 3rd class
- Higher fare = higher chance of survival
- Age was not a strong survival factor

4. Conclusion

Gender and Passenger Class were the two strongest factors determining survival on the Titanic.
